Bucharest, Romania

PROFESSIONAL SUMMARY

Full-stack developer and AI-assisted engineer, **7 years** coding, **17 products** built (**13 live in production**, solo-deployed). Core stack: **React/Next.js, Node.js, TypeScript, PostgreSQL** for multi-tenant SaaS with row-level security, plus **Python** for AI pipelines - RAG systems (PostgreSQL + pgvector, hybrid dense/full-text retrieval, mechanical citation validation), structured LLM extraction, and workflow automation. I own the whole thing, schema to deploy, and I use AI as a force multiplier throughout: I direct it, I own the result. Available immediately, remote or Bucharest.

CORE COMPETENCIES

Full-Stack Development (React/Next.js + Node.js)

Python (AI pipelines, automation, data)

TypeScript / JavaScript

PostgreSQL & pgvector

AI-Assisted Development & LLM Orchestration

RAG Pipelines & Hybrid Retrieval

Multi-Tenant SaaS & Row-Level Security

REST APIs & System Integrations

WORK EXPERIENCE

Freelance / Independent SaaS Developer 2022 - Present

Founder & Full-Stack Engineer

Remote

- Built and shipped **13 SaaS products** end to end (schema design to production, no handoff) using **React, Next.js, Node.js, TypeScript, PostgreSQL, and Python**
- Designed **multi-tenant architectures with row-level security** for two live B2B products (fleet management and CRM/automation) serving real clients with zero cross-tenant data leaks
- Built RAG and LLM-integration systems in Python/TypeScript: OpenAI Structured Outputs for invoice data extraction, PostgreSQL + pgvector hybrid retrieval with mechanical citation validation for a regulatory Q&A system
- Built NexaCRM, a white-label CRM on Laravel with subdomain-based multi-tenancy, Stripe billing, and Romanian legal integrations (e-Factura, CUI/CNP validation)
- Ran an outreach pipeline for Romanian SMBs, closing **350-400 EUR per site**, paid on delivery, no upfront

TechWise Electronics Sep 2025 - Present

Software Engineer (SoilMonitor IoT project)

Pitesti, Romania

- Own the full device side of an IoT soil-monitoring product deployed in the field: firmware architecture, power behavior, and field-condition edge cases
- Model Li-ion + solar power behavior at low temperatures and measure per-transmission LoRa costs (mAh) to keep the device running through winter
- Tune LoRa transmission frequency and spreading factor to balance data fidelity against a tight power budget

TechWise Electronics Jun 2024 - Sep 2025

Junior Developer

Pitesti, Romania

- Programmed industrial robots using **C++, Python, and C#** for embedded control systems
- Bridged hardware logic with software interfaces and wrote automation workflows for production lines

PROJECTS

Monograph: RAG System for FDA Drug Label Citations AI / RAG

Retrieval-augmented Q&A system over FDA drug labels with exact regulatory section citations. Hybrid dense (pgvector) + full-text retrieval fused via Reciprocal Rank Fusion, listwise reranking, mechanical citation validation, hash-chained audit log, per-tenant row-level security. Corpus of 36 FDA labels / 10,983 chunks, evaluated against a 50-question golden set.

Next.js, TypeScript, PostgreSQL + pgvector, DeepSeek, Gemini embeddings, Langfuse

Reminders.ro: CRM & Business Automation Platform LIVE

Full-stack B2B CRM with client records, automated reminders, and operational workflows. Multi-tenant architecture with row-level security; each business's data is fully isolated. Real users, production traffic.

React 19, Node.js, Supabase (PostgreSQL), Prisma, Twilio, Framer Motion

InvoiceExtractor: Invoice Extraction & Accounting Export Pipeline AI

Extracts structured data from Romanian supplier invoices (PDF, photo, or UBL XML) via OpenAI Structured Outputs, validates vendor CUI against ANAF, and exports to Saga, SmartBill, or WinMENTOR accounting formats. In pilot with a handful of small Romanian accounting firms.

Next.js, Supabase (PostgreSQL), OpenAI Responses API, Bottleneck

ClipForge: Automated Video Pipeline Python / AI

AI video pipeline with no manual steps: a Telegram command triggers GPT script generation, TTS voice, Pexels footage fetch, ffmpeg assembly, and synced captions. Comes out ready to post.

Python async, OpenAI, Whisper, ffmpeg, pytest

EDUCATION

B.Eng. Applied Computer Science (in progress) Politehnica Bucuresti, Faculty of Industrial Engineering and Robotics 2023 - Present (FIIR)

Studying software engineering, embedded programming, and industrial systems alongside full-time product development.

SKILLS

Languages: Python, TypeScript, JavaScript, C / C++ / C#, SQL

Backend & Data: Node.js, Express, PostgreSQL, pgvector, Prisma, Supabase, SQLite, Row-Level Security, REST APIs

Frontend: React, Next.js, Vite, Tailwind CSS, Framer Motion, Radix UI, React Native

AI & Automation: AI-assisted development, RAG pipelines, hybrid retrieval (dense + full-text), OpenAI API, Claude API, DeepSeek API, Whisper, prompt engineering, structured outputs

Tooling & DevOps: GitHub, Vercel, Claude Code, Docker-free deploys, ffmpeg, Zod, React Hook Form
